

How to add up to 5 rules files in Guardian.

### Step 1

Go to Guardian and select the List tab. You are looking for the “Choose the columns that will be displayed in the Market List” option, which is highlighted above.

### Step 2

You should now see this form, which will allow you to add columns. I have highlighted the option that allows up to 5 Automation Rules columns to be displayed. Here I have selected just 2.

### Step 3

Close the form and save your changes. I strongly recommend using the right-hand button and saving to a unique name rather than overwriting the Bet Angel default.
